

July 2011

State-Level Health Insurance Coverage Estimates from the 2009 American Community Survey

Introduction

This issue brief provides state-level estimates of health insurance coverage by age and income from the American Community Survey (ACS). The ACS is a relatively new source of state-level health insurance coverage estimates, but its large sample size makes it a potentially powerful source of information for states. The references at the end of this brief provide background on the ACS and how it compares to other surveys that measure health insurance coverage.

The maps and tables included in this brief provide state-level estimates for the nonelderly population (age 0 to 64), children (age 0 to 18), and nonelderly adults (age 19 to 64). Within each age group, we also present separate estimates for the low-income population (people with family incomes below 200 percent of federal poverty guidelines).

Standard errors of the estimates are provided in the Appendix.

Highlights

- Among **all non-elderly**, 66.7% had private health insurance coverage, 16.0% had public coverage, and 17.3% were uninsured in 2009 (Exhibits 1 and 3). Low-income people are more likely to have public coverage or to be uninsured. Within this group, 34.6% had private health insurance coverage, 36.3% had public coverage, and 29.1% were uninsured in 2009 (Exhibits 2 and 4).
 - Nationally, the uninsurance rate increased by 0.7 percentage points between 2008 and 2009, with 18 states experiencing a significant increase in the uninsurance rate (Exhibits 5 and 7). Among the low-income non-elderly, there was no significant change in the uninsurance rate between 2008 and 2009; 3 states experienced a significant increase and 2 states experienced a significant decline in the uninsurance rate (Exhibits 6 and 8).
- Among **children**, 61.4% had private health insurance coverage, 29.6% had public coverage, and 9.0% were uninsured in 2009 (Exhibits 9 and 11). Among low-income children, 30.6% had private health insurance coverage, 56.2% had public coverage, and 13.2% were uninsured in 2009 (Exhibits 10 and 12).

- Nationally, the uninsurance rate decreased by 0.8 percentage points between 2008 and 2009, with 15 states experiencing a significant decline and one state experiencing an increase in the percent of children who were uninsured (Exhibits 13 and 15). Among low-income children, the uninsurance rate decreased by 1.8 percentage points between 2008 and 2009, with 21 states experiencing a significant decline (Exhibits 14 and 16).
- Among **non-elderly adults**, 69.0% had private health insurance coverage, 10.2% had public coverage, and 20.8% were uninsured in 2009 (Exhibits 17 and 19). Among low-income non-elderly adults, 37.0% had private health insurance coverage, 24.2% had public coverage, and 38.8% were uninsured in 2009 (Exhibits 18 and 20).
 - Nationally, the uninsurance rate increased by 1.3 percentage points between 2008 and 2009; 27 states had a significant increase in the uninsurance rate for this age group (Exhibits 21 and 23). Among low-income non-elderly adults, the uninsurance rate increased by 1.1 percentage points, with 11 states experiencing a significant increase and one state experiencing a significant decline in the uninsurance rate (Exhibits 22 and 24).

Source: U.S. Census Bureau, 2008 and 2009 American Community Survey, civilian non-institutionalized population. Counts are presented in thousands; income measured as family income in relation to HHS Federal Poverty Guidelines.

Significant difference between years is indicated by confidence levels of: * = 90%, ** = 95%, *** = 99%.

Methodology

Data source: Data provided in this brief are from the 2008 and 2009 American Community Survey (ACS) Public Use Microdata Sample (PUMS) files. The ACS, conducted by the U.S. Census Bureau, is an ongoing general household survey of the entire population (including persons living in group quarters). This mandatory survey (persons are required to respond under law) replaced the long form of the decennial census and provides annual estimates of health insurance coverage for the nation, states, and sub-state geographies.

A question on health insurance coverage was added in 2008 that asks about current health insurance coverage for all members of the household, with the following response categories:

- Insurance through a current or former employer or union (of this person or another family member)
- Insurance purchased directly from an insurance company (of this person or another family member)
- Medicare, for people age 65 and over, or people with certain disabilities
- Medicaid, Medical Assistance, or any kind of government-assistance plan for those with low incomes or a disability
- TRICARE or other military health care
- VA (including those who have ever enrolled for or used VA health care)
- Indian Health Service
- Any other type of health insurance or health coverage plan – specify

Beginning in 2009 the Census Bureau added a series of logical edits to the editing routine for health insurance coverage. These logical edits are intended to improve the reporting of insurance coverage in the survey. We use the 2008 PUMS file with logical edits applied by SHADAC so comparisons over time are possible (State Health Access Data Assistance Center 2010a).

Universe for analysis: We restrict the ACS universe to the civilian non-institutionalized population.

Primary insurance coverage: We analyze the ACS health insurance data by primary source of insurance coverage. We use hierarchical assignment to assign each individual to a single source of health insurance coverage, although respondents are able to report multiple sources of coverage. If multiple sources of coverage were reported for an observation, primary source of coverage was assigned in the following order:

- 1) Medicare (for people age 19 or older);
- 2) employer-sponsored insurance (ESI), TRICARE or other military health care, or VA (including those who have ever enrolled for or used VA health care);
- 3) Medicaid;
- 4) Direct purchase coverage; and
- 5) Medicare (for people age 18 or under).

Those reporting no source of coverage or only Indian Health Services are classified as uninsured. For this brief we classify coverage as private or public. Private coverage includes ESI, Military, VA, and direct purchase. Public coverage includes Medicare and Medicaid.

Federal poverty guidelines: Family income as a percentage of poverty is determined using the U.S. Department of Health and Human Services (HHS) Federal Poverty Guidelines (FPG). These guidelines differ slightly from the Census Bureau's Federal Poverty Thresholds (FPT) commonly referred to as the Federal Poverty Level (FPL).

Appendix A: Standard Errors

Standard errors are provided in this Appendix for the 2009 American Community Survey health insurance coverage estimates. They are presented as a table for each age/poverty group, including the standard error for the number and the percent.

Confidence intervals can be calculated from the standard errors; for example:

The 99% confidence interval is $\pm(2.576 * SE)$

The 95% confidence interval is $\pm(1.96 * SE)$

The 90% confidence interval is $\pm(1.645 * SE)$

Standard errors for the change in coverage from 2008-2009 are not provided here because the tables provide significance testing. These are available upon request to shadac@umn.edu or 612-624-4802.
