

December 2012

State-Level Health Insurance Coverage Estimates from the 2011 American Community Survey

Introduction

This issue brief provides state-level estimates of health insurance coverage by age and income from the American Community Survey (ACS). The ACS is a relatively new source of state-level health insurance coverage estimates, but its large sample size makes it a potentially powerful source of information for states. The references at the end of this brief provide background on the ACS and how it compares to other surveys that measure health insurance coverage.

The maps and tables included in this brief provide state-level estimates for the nonelderly population (age 0 to 64), children (age 0 to 18), and nonelderly adults (age 19 to 64). Within each age group, we also present separate estimates for the low-income population (people with family incomes at or below 200 percent of federal poverty guidelines).

Standard errors of the estimates are provided in the Appendix.

Highlights

- Among **all non-elderly**, 65.0% had private health insurance coverage, 17.9% had public coverage, and 17.2% were uninsured in 2011 (Exhibits 1 and 3). Low-income people are more likely to have public coverage or to be uninsured. Within this group, 34.4% had private health insurance coverage, 36.4% had public coverage, and 29.2% were uninsured in 2011 (Exhibits 2 and 4).
 - Nationally, the uninsurance rate decreased by 0.4 percentage points between 2010 and 2011, with 10 states experiencing a significant decline in the uninsurance rate. (Exhibits 5 and 7). Among the low-income non-elderly, the uninsurance rate decreased by 1.3 percentage points between 2010 and 2011, with 20 states experiencing a significant decline in the uninsurance rate (Exhibits 6 and 8).
- Among **children**, 58.8% had private health insurance coverage, 33.3% had public coverage, and 7.9% were uninsured in 2011 (Exhibits 9 and 11). Among low-income children, 26.9% had private health insurance coverage, 61.6% had public coverage, and 11.5% were uninsured in 2011 (Exhibits 10 and 12).

- Nationally, the uninsurance rate decreased by 0.6 percentage points between 2010 and 2011; 2 states experienced a significant increase and 9 states experienced a significant decline in the percent of children who were uninsured (Exhibits 13 and 15). Among low-income children, the uninsurance rate decreased by 1.1 percentage points between 2010 and 2011, with 9 states experiencing a significant decline (Exhibits 14 and 16).
- Among **non-elderly adults**, 67.6% had private health insurance coverage, 11.4% had public coverage, and 21.0% were uninsured in 2011 (Exhibits 17 and 19). Among low-income non-elderly adults, 38.1% had private health insurance coverage, 24.1% had public coverage, and 37.8% were uninsured in 2011 (Exhibits 18 and 20).
 - Nationally, the uninsurance rate decreased by 0.4 percentage points between 2010 and 2011; one state had a significant increase in the uninsurance rate for this age group and 9 states had a significant decline (Exhibits 21 and 23). Among low-income non-elderly adults, the uninsurance rate decreased by 1.6 percentage points, with 25 states experiencing a significant decline in the uninsurance rate (Exhibits 22 and 24).

FPG: income measured as family income in relation to HHS Federal Poverty Guidelines. Family defined as a Health Insurance Unit.

Significant difference between years is indicated by confidence levels of: * = 90%, ** = 95%, *** = 99%.

Methodology

Data source: Data provided in this brief are from the 2010 and 2011 American Community Survey (ACS) Public Use Microdata Sample (PUMS) files. The ACS, conducted by the U.S. Census Bureau, is an ongoing general household survey of the entire population (including persons living in group quarters). This mandatory survey (persons are required to respond under law) replaced the long form of the decennial census and provides annual estimates of health insurance coverage for the nation, states, and sub-state geographies.

A question on health insurance coverage was added in 2008 that asks about current health insurance coverage for all members of the household, with the following response categories:

- Insurance through a current or former employer or union (of this person or another family member)
- Insurance purchased directly from an insurance company (of this person or another family member)
- Medicare, for people age 65 and over, or people with certain disabilities
- Medicaid, Medical Assistance, or any kind of government-assistance plan for those with low incomes or a disability
- TRICARE or other military health care
- VA (including those who have ever enrolled for or used VA health care)
- Indian Health Service
- Any other type of health insurance or health coverage plan – specify

Universe for analysis: We restrict the ACS universe to the non-institutionalized population.

Primary insurance coverage: We analyze the ACS health insurance data by primary source of insurance coverage. We use hierarchical assignment to assign each individual to a single source of health insurance coverage, although respondents are able to report multiple sources of coverage. If multiple sources of coverage were reported for an observation, primary source of coverage was assigned in the following order:

- 1) Medicare (for people age 19 or older);
- 2) employer-sponsored insurance (ESI), TRICARE or other military health care, or VA (including those who have ever enrolled for or used VA health care);
- 3) Medicaid;
- 4) Direct purchase coverage; and
- 5) Medicare (for people age 18 or under).

Those reporting no source of coverage or only Indian Health Services are classified as uninsured. For this brief we classify coverage as private or public. Private coverage includes ESI, Military, VA, and direct purchase. Public coverage includes Medicare and Medicaid.

Federal poverty guidelines: Family income as a percentage of poverty is determined using the U.S. Department of Health and Human Services (HHS) Federal Poverty Guidelines (FPG). These guidelines differ slightly from the Census Bureau's Federal Poverty Thresholds (FPT) commonly referred to as the Federal Poverty Level (FPL).

Health insurance unit: Family is defined as a Health Insurance Unit (HIU) for calculation of FPG. The HIU differs from the general Census Bureau definition of family, all related members in a household. The HIU is based on individuals who would likely be considered a family unit in determining eligibility for either private or public coverage (State Health Access Data Assistance Center 2012a).

Appendix A: Standard Errors

Standard errors are provided in this Appendix for the 2011 American Community Survey health insurance coverage estimates. They are presented as a table for each age/poverty group, including the standard error for the number and the percent.

Confidence intervals can be calculated from the standard errors; for example:

The 99% confidence interval is $\pm(2.576 * SE)$

The 95% confidence interval is $\pm(1.96 * SE)$

The 90% confidence interval is $\pm(1.645 * SE)$

Standard errors for the change in coverage from 2010-2011 are not provided here because the tables provide significance testing. These are available upon request to shadac@umn.edu or 612-624-4802.

Source: U.S. Census Bureau, 2011 American Community Survey, non-institutionalized population. Counts are presented in thousands.

Estimates reflect the primary source of health insurance coverage and do not account for reports of multiple types of coverage.

FPG: income measured as family income in relation to HHS Federal Poverty Guidelines. Family defined as a Health Insurance Unit.
